Commission on Sustainable Development**Nineteenth session**

2-13 May 2011

Item 3 of the provisional agenda¹**Thematic cluster for the implementation cycle****2010-2011 (policy session)****Report of the High-Level CSD Intersessional Meeting on
a 10-Year Framework of Programmes on Sustainable
Consumption and Production****Panama City, 13 – 14 January 2011****Contents***Paragraphs* *Page*

I. Introduction.....		
II. Sessions and roundtables		
III. Chair's Summary of plenary sessions and roundtables.....		
IV Annexes.....		

¹ E/CN.17/2011/1.

I. Introduction

1. At the request of Member States during the 18th session and as a contribution to the intersessional consultative process for the nineteenth session of the Commission on Sustainable Development (CSD), the Department of Economic and Social Affairs (DESA) and the United Nations Environment Programme (UNEP) held the High-Level CSD Intersessional Meeting on a 10-Year Framework of Programmes on Sustainable Consumption and Production hosted by the Government of Panama. The meeting took place in Panama City from 13 – 14 January 2011.
2. The meeting was attended by 155 participants. They came from Africa (10), Asia (18), Eastern Europe (11), Latin America and the Caribbean (26) Western Europe and other countries (27) including Australia, Canada and USA. The Holy See was present as observer. The EU was also represented. The UN system was represented by ECLAC, DESA, UNDP, UNEP, UNESCO, and UNIDO. There were also a number of representatives from Major Groups. In addition to the National Environmental Authority, the host country of Panama was represented by the Ministry of Foreign Affairs, Ministry of Education, Ministry of Health, Ministry of Social Development, National Secretariat for Science, Technology and Innovations, National Association for the Preservation of Nature, Panama Maritime Authority, Panama Canal Authority, and Authority for Protection of Consumers and Safeguarding Competition.
3. The discussions were based on two background documents, one on a review of options for institutional structure for the 10-year framework of programmes and the other one on criteria and guidelines for potential programmes together with an annex compiling programmes submitted as a result of a call for programmes².
4. Sustainable consumption and production is referenced in the Johannesburg Plan of Implementation (JPOI), adopted at the World Summit on Sustainable Development in 2002, as one of three overarching objectives of, and essential requirements for, sustainable development, together with poverty eradication and managing the natural resource base of economic and social development (JPOI, I.2).
5. Strong political commitment has been demonstrated for SCP since WSSD, including through regional roundtables on SCP and endorsement of regional strategies on SCP in Africa, Latin America, Europe and the Arab region, and the development of national SCP programmes and increased efforts to mainstream SCP into development plans.

² Both documents can be found on the CSD-19 website
http://www.un.org/esa/dsd/dsd_aofw_scpp/scpp_tenyearframprog.shtml

6. The elevated level of political commitment to promoting sustainable consumption and production is reflected most recently in the Strategic Plan of the Convention on Biological Diversity that includes an SCP target (Aichi Target 4): “By 2020, at the latest, Governments, business and stakeholders at all levels have taken steps to achieve or have implemented plans for sustainable production and consumption and have kept the impacts of use of natural resources well within safe ecological limits”.³
7. During discussions on the 10-year framework of programmes on sustainable consumption and production (10YFP) at the eighteenth session of the Commission on Sustainable Development, success stories with regard to sustainable consumption and production were presented, but it was noted that initiatives were often fragmented, missing opportunities to realize synergies. Delegations noted that a 10YFP is needed to provide strengthened and coherent international support to the diversity of existing policy and other initiatives at national and regional levels as well as to help member States and other stakeholders address new and emerging SCP challenges. Initiatives to date, such as the Marrakech Process⁴, have been voluntary in nature, and, while they have been effective as an interim means of bringing together communities of interest and sharing knowledge and information across countries and regions, they lack a formal mechanism that would ensure sustainability.
8. The Commission recognized that the framework could provide a platform for the broad sharing of experiences, lessons learned, best practices and knowledge at multiple levels and could allow for the replication and scaling up of successful initiatives. It could also assist countries in monitoring progress toward their own goals and objectives. It was also noted by many Delegates that the framework should help to mobilize the technical and financial support necessary to support the implementation of national and regional initiatives.
9. This intersessional meeting will be important to a successful Intergovernmental Preparatory Meeting (IPM) (28 February – 4 March 2011) and CSD-19 negotiations (2-13 May 2011) on the 10YFP on SCP.

II. Sessions

10. The meeting was opened by H.E. Ms. Lucía Chandeck, Administrator General of the National Environmental Authority of Panama and H.E. Mr. László Borbély, Minister of Environment and Forestry of Romania and Chair of CSD19. Ms. Chandeck, after welcoming everyone to Panama, underlined the importance of sustainable consumption and production

³ The Strategic Plan of the Convention on Biological Diversity (the “Aichi Target”) adopted by COP 10, 18- 29 October 2010, Nagoya, Japan. The “Aichi Target” includes 20 headline targets, organized under five strategic goals. One of these goals addresses the underlying causes of biodiversity loss and includes (*i.e.* “Target 4”).

⁴ Launched in 2003, in response to Chapter III of the JPOI, the Marrakech Process is a global and informal multi-stakeholder platform to promote the implementation of policies and capacity building on SCP and to support the development of a 10YFP. UNEP and UNDESA are the facilitating agencies of this process, with an active participation of national governments, development agencies, private sector, civil society and other stakeholders.

(SCP) for sustainable development. She also stressed the importance of this intersessional meeting for the preparation of the 19th session of the Commission on Sustainable Development (CSD-19).

11. Mr. Borbély underlined that progress on the important topic of sustainable consumption and production can only be achieved by a strong partnership among Governments, private and public entities, with strong involvement of civil society. He also stressed the importance of this meeting in helping to develop a supportive international framework to promote more sustainable consumption and production patterns, which can also be a contribution to the UNCSD in 2012.
12. The opening was followed by a presentation on objectives of the intersessional meeting and a roadmap to CSD-19 by Mr. Tariq Banuri, Director Division for Sustainable Development, Department of Economic and Social Affairs of the United Nations. He especially underlined the challenge facing CSD-19 to de-compartmentalize the SCP agenda and to mainstream SCP across government agencies, regional and international entities.
13. Ms. Sylvie Lemmet, Director, Division of Technology, Industry and Economics, UNEP, talked about the accomplishments and lessons of the Marrakesh Process and their relevance to the development of the 10YFP for negotiation at CSD-19.
14. This was followed by a statement from Mr. Borbély, who presented his views about the elements he believes should be taken into consideration when designing the 10YFP. The vision for the 10YFP needs to be shared by all stakeholders and reflect their level of ambition and aspiration in pursuing and implementing SCP. As he explained, we have to reach a common understanding of the main functions of the 10YFP and the institutional structure that could best fulfil these functions, allowing for the gathering and sharing of experiences, progress, as well as knowledge on sustainable consumption and production. In doing so, we have to identify common objectives and targets by using existing SCP fora and initiatives, linking and building synergies among them through an effective and efficient institutional architecture.
15. The opening session concluded with the plenary discussion on goals and objectives of the 10YFP⁵. It was followed by the First session, chaired by representatives from Germany and Mexico, which discussed the main objectives and functions for the possible 10YFP as well as key elements of the 10YFP. To facilitate the discussions in the subsequent roundtables, Ms. Chantal Line Carpentier, Sustainable Development Officer in the Division for Sustainable Development, Department of Economic and Social Affairs of the United Nations, gave a presentation on mapping potential functions of the 10YFP. Following discussions in four roundtables, rapporteurs presented views expressed at the roundtables to the plenary.

⁵ All the substantive discussion both at the plenary and roundtables as well as way forward are reflected at the Chair's summary in the next chapter of the report.

16. The Second session, chaired by representatives of Guatemala and the United States of America, focused on the potential structure of the 10YFP, discussing the key elements and mechanisms of the 10YFP. It followed the same format as the First session. Roundtables were preceded by the presentation of lessons from comparison of models for the 10YFP by Mr. David O'Connor, Chief, Policy Analysis and Networks Branch in the Division for Sustainable Development, Department of Economic and Social Affairs of the United Nations, and Ms. Khalida Bouzar, Deputy Director, Division of Technology, Industry and Economics, UNEP. Following the roundtables discussions, rapporteurs presented views expressed in the four roundtables to the plenary.
17. The first day was concluded by a statement by the Under-Secretary-General, Mr. Sha Zukang and Secretary-General of the UN Conference on Sustainable Development (UNCSD), which was delivered, in his absence, by Mr. Banuri. The statement focused on SCP and the Path to Rio+20. Mr. Sha underlined that the objective of UNCSD is to ensure renewed political commitment for sustainable development; assess progress to date and remaining gaps in implementation; and address new and emerging challenges, while the thematic focus areas are: a green economy in the context of sustainable development and poverty eradication, and an institutional framework for sustainable development. Sustainable consumption and production patterns are intrinsically linked to these objectives and themes. He also stressed that sustainable consumption and production cuts across all economic sectors. This is an agenda for all government agencies, not just for environmental ministries. The 10-Year Framework, if adopted and translated into specific initiatives and actions, can become an important engine to support the UNCSD outcomes implementation. It can promote rapid improvement towards decent living standards for all human beings while at the same time significantly reducing environmental impacts of consumption and production. It is an important building block for an ambitious international agreement at UNCSD.
18. The next day started with the Third session, chaired by representatives of Italy and Mali, which discussed key programme areas and criteria to build programmes for the 10YFP. Prior to the roundtable discussions, Mr. Arab Hoballah, Chief, Sustainable Consumption and Production Branch, Division of Technology, Industry and Economics, UNEP, made a presentation on potential guidelines and criteria to select and build programmes based on regional priorities and programmes submitted by various stakeholders and member States in response to the call for programmes issued by DESA. Following the roundtables discussions, rapporteurs presented views expressed in the four roundtables to the plenary.
19. The Fourth session, chaired by the representatives of the Czech Republic and Indonesia, discussed support and means of implementation at national and regional levels. UN agencies and programmes were invited to describe how they are contributing to SCP and how the 10YFP could help them better deliver on SCP. The presentations were followed by discussions by member States.

20. The concluding session was chaired by Mr. Andrew Goledzinowski, CSD-19 Co-Chair (Australia). In her concluding remarks, Ms. Chandeck presented elements of the Chair's Summary which was distributed in its draft form to all participants. Mr. Borbély talked about the way forward, especially stressing the need to work towards achieving a 10YFP which represents a highest common denominator. He stressed that there appears to be an emerging convergence on the functions of a 10YFP, a coordinated institutional structure, and the criteria for developing programmes. He concluded by expressing his assurance that CSD-19 will be able to move the SCP agenda forward.

III. Chair's Summary of plenary sessions and roundtables

21. This is a summary of the key proposals, ideas, and concerns raised in the discussions in plenary and roundtables. The summary follows the order mentioned above, highlighting areas of broad convergence, areas where many or several member States and other stakeholders would appear to agree, and areas where there is no apparent convergence of views and more dialogue is needed.

Opening Session: Setting the context

22. There was general agreement of the participants that a 10YFP is needed and that it should be concluded at CSD-19. Speakers noted that the recent multiple crises have served as stark reminder of the urgency of changing consumption and production patterns from business as usual. Many stressed the need for a political will to be ambitious and actionable in launching a 10YFP -- one that, in looking back a decade hence, we can honestly say has contributed in a meaningful way to achieving sustainable patterns of consumption and production in all countries.

23. The sustainable consumption and production (SCP) agenda is embedded in the Rio Declaration and Rio Principles, including the principle of common but differentiated responsibilities. SCP is a cross-cutting issue and has been addressed as such in the CSD since CSD-11 just after the Johannesburg Summit, which gave the mandate to develop a 10-year framework of programmes on SCP.

24. It was stressed that it is of high importance that this framework should be able to address the three dimensions of sustainable development in a balanced and integrated manner and should be supported by a globally recognized, credible and coherent science base. The importance of building the 10YFP from the "bottom-up" was stressed, ensuring that it has the flexibility to meet diverse needs and priorities of different countries, developed, developing and with economies in transition, as well as the ability to ensure that future programmes could be easily incorporated within the framework. In this regard, there was broad recognition by speakers of the need to build on the accomplishments of the Marrakech Process, which was cited as a good example of incorporating regional and national needs and identifying gaps in

implementation. It was further mentioned that the 10YFP could be built upon existing institutional arrangements.

25. It was suggested that it is time to shift from merely advocating SCP to actually setting up an effective framework to support the mainstreaming of SCP across all areas of decision making, public and private.

Goal and objectives of 10YFP

26. There was a broad convergence of views that the 10YFP should have ambitious goals. Several countries stressed the need to shape and launch at CSD-19 an “ambitious and actionable 10-year framework of programmes ... in support of regional and national initiatives to accelerate the shift towards sustainable consumption and production to promote social and economic development within the carrying capacity of ecosystems”.
27. Participants stressed the importance of a common global vision and shared goals as basis for the 10YFP, but views differed on the nature of the vision. While some participants were of the view that the JPOI provides a vision and goals, and these could simply be reaffirmed rather than spending time negotiating a new vision, others felt that the 10YFP goals should be more actionable than those contained in the JPOI.
28. Many agreed that aspirational goals are important, but there was less agreement on whether specific, quantified goals would be useful, considering inter alia the wide diversity among countries’ levels of development and priorities. Several countries suggested the adaptation of overall goals into region-specific goals. A number supported a differentiated approach to defining goals and objectives, based on experience and capacities in different countries, which resembles a “bottom-up” approach.
29. It was suggested that the 10YFP could place primary emphasis on seizing “win-win” opportunities – such as energy efficiency improvements -- with multiple economic, social and/or environmental benefits.
30. Some participants insisted that participation in the 10YFP should be seen as voluntary.
31. A few participants suggested that the 10YFP representing an initial step down a long road, which may entail future ambitious agreements, such as a legally binding framework.

Session 1: Functions of 10YFP

32. There was broad acceptance of the functions enumerated in background paper, namely (1) Commitment on global common goals and vision, (2) Knowledge sharing and networking, (3) Enabling frameworks and strategic planning and investment, (4) Technical cooperation, (5) Collaboration, and (6) Awareness raising, education and civil society mobilization.
33. Emphasis was placed by many participants on the importance of involvement of all key stakeholders at all stages and of mainstreaming SCP in all ministries and policy-making processes. Among suggestions for additional functions of the 10YFP, financial cooperation and capacity building – to complement technical cooperation – were among the most frequent, and supporting innovation was also emphasized.
34. It was reiterated that the 10YFP should serve an important clearinghouse function. Building public-private partnerships was seen to be particularly important as a means of engaging business in the 10YFP. Some noted the importance of scaling up investment in infrastructure to support sustainable consumption and production patterns not only through private sector engagement but also through involvement of IFIs.
35. A number of participants stressed the importance of engaging the educational system and the scientific community in SCP, building a strong science base for policy and providing young people with the knowledge and skills to become SCP-literate adults. The need to support the participation of scientists from developing countries in SCP research networks was also stressed.
36. Several also mentioned the role of the media in awareness raising and influencing public opinion, which in turn can have an impact on policy making and on the strength of political commitment to promote and implement SCP. Information and communications technologies are important enabling technologies, and effective communication of what SCP is about and why it is important to all countries was highlighted as an important function of the 10YFP.
37. More discussion is needed with respect to indicators and monitoring progress as various views were expressed. It was suggested that, if such monitoring is included as a function of the 10YFP, it should apply not only to regional and national actions but to international support as well. It should also be adapted to level of development. It was observed that national mechanisms for monitoring and review would need strengthening in many developing countries.
38. A number of participants flagged the need for sensitivity to how the 10YFP and its functions relate to other processes and international negotiations, e.g. Rio+20, WTO, UNFCCC, to avoid duplication and conflicts but also to find possible synergies where feasible.

39. Several countries also flagged the special challenges and priorities of the least developed countries and the small-island developing States with respect to SCP implementation. The 10YFP needs to address the fact that, for the poor in developing countries, the problem remains one of underconsumption. In this regard, one participant referred to an emphasis on sufficiency over efficiency in consumption.

Session 2: Institutional structure

40. There was a rich discussion of possible lessons and elements which might be drawn from the six models reviewed in Background Paper #1 (Marrakech Process, MDGs, SAICM, CGIAR, GAVI and UN-Water, -Energy and -Oceans), as well as some others that were not reviewed (e.g., One UN pilot projects in 8 countries). There was a broad convergence that the six models provided a good basis to start discussions; however, a few participants indicated that they found it difficult to draw lessons because some models were designed to serve very different functions.

Usefulness of models

41. Several countries supported a 10YFP structure similar to the SAICM model with its three key features: political declaration; global policy; programmes. It was also noted approvingly by those countries that SAICM engages all stakeholders on an equal footing.
42. It was mentioned that, in evaluating how well a model delivers, it is important to evaluate its cost-effectiveness. By one assessment, for example, the SAICM approach is heavy on administration and relatively costly. Some participants suggested that a “SAICM light” could make more sense.
43. Some countries mentioned the positive lessons from the Marrakech Process, arguing that the MDG model seemed too broad, GAVI too specific, and UN-Water, -Energy, -Oceans perhaps suitable for interagency coordination but not appropriate to facilitating broader stakeholder engagement.
44. One participant observed that the level of ambition for the 10YFP would influence the choice of model to emulate, as the Marrakech Process model is more voluntary than the other models reviewed. On the other hand, with informality comes flexibility. Generally, there would seem to be a beginning of a convergence towards a “SAICM light” or a more formal Marrakech Process.

Flexibility

45. A number of participants emphasized the need for flexibility of the 10YFP, in order to ensure that programmes could be added as the need arises (e.g., the agriculture supply chain), emerging issues could be addressed, and regional and national specificities accommodated.

Reference was made in particular to ways of engaging different stakeholders and ensuring a balanced participation of the public and private sectors.

46. A few participants stressed that form follows function, suggesting that the key elements of the 10YFP could not be determined before member States had formally agreed on the functions to be served.

Mainstreaming at national and regional levels

47. The importance of regional and national SCP centers was underlined. The majority were of the view that focal points should be used as bridges between different levels and it was also underlined that they should involve not only governments but other relevant stakeholders. It was suggested by some that national and regional focal points could report regularly to an international secretariat charged with reviewing progress.
48. High-level political ownership of the SCP agenda is a challenge which needs to be addressed in many countries, but perhaps especially developing countries faced with multiple other sustainable development challenges. SAICM and MDGs are both models which secured high-level political commitment.
49. In most countries, SCP remains largely confined to the environment ministries, but a few examples exist of where there has been a broader mainstreaming of SCP, including in the economics, finance and planning ministries. UNEP has supported several countries in such efforts and developed guidelines for that purpose. This is an area where sharing of experiences could be facilitated by the 10YFP.
50. One participant described a successful experience with sub-regional coordination across environment ministries in Central America. They have developed regional projects and deal with donors and development banks in a coordinated fashion, which has facilitated fundraising for the work programme developed.
51. It was noted that some SCP challenges call for a global, cross-regional approach, as many supply chains are global in nature and taking a life-cycle approach to SCP would necessarily involve multiple regions.
52. Several participants noted that an effective 10YFP would require mainstreaming the SCP agenda into the work of most UN funds and programmes and agencies of the UN system, including the IFIs, taking into consideration their governing structures and arrangements, as well as into that of bilateral development cooperation agencies.

Knowledge sharing

53. Different structures and arrangements can facilitate knowledge sharing at different levels. At regional level, research centres and knowledge hubs can be valuable. National level sharing can be done through national networks and cross-ministerial task forces or working groups. Several saw a need to share policy knowledge and experience within and across regions.
54. One participant cited the Marrakech Process experience, where knowledge sharing networks were set up at all levels as a voluntary process. Another suggested that the SAICM model is well suited – with national focal points, including both government officials and other stakeholders, connected in networks and with a more formalized structure yielding stronger commitment to achieving goals.

Stakeholder engagement

55. A number of options were mentioned for engagement of the private sector, including public-private partnerships; voluntary agreements with government on cleaner production; providing the right incentives to private sector engagement; and building SCP into core business practices.
56. All stakeholders have a role to play in SCP and the form of their engagement will vary. Governments have a strategic role to play, first as those who will decide on the 10YFP at CSD-19 and then as those with the power to create laws and regulations which could facilitate implementation e.g. by changing production practices and consumer behaviour.

Financing

57. Several member States and other participants stressed the importance of predictable financial resources for implementation of the 10YFP.
58. Financing is an area where member States seem still to be rather far apart. Most acknowledged that there would be financial implications associated with implementing the 10YFP and these should be assessed as much as possible. Several countries indicated the need for new and additional resources. Several delegations indicated support for an SCP trust fund, along the lines of the SAICM Quick Start Programme, that could help to focus donor support in a more predictable and transparent process.
59. However, many countries were in favour of a more efficient use and leveraging of existing resources. Rather than an upfront commitment of funds, a suggestion was made to seek funding for specific programmes once these had been developed and agreed. It was stated by some that funding would become available if the value added/impact of the 10YFP is clear. A participant noted that resources should not be limited only to finance but include human resources and technology transfer.

60. Some participants stressed the need to look at new and innovative sources of financing for SCP, including tapping sources of climate finance and mobilizing funds from the private sector, e.g., through public-private partnerships. One participant suggested that, if mainstreaming of SCP were to get traction, then economic and line ministries, in addition to the environment ministry, might be expected to allocate a small share of their budgets to SCP work.
61. Several participants supported the integration of SCP funding more fully into bilateral and multilateral funding, including the IFIs and regional development banks. It was emphasized, however, that this would need to respond to national priorities in developing countries.

Coordination and role of secretariat

62. Several member States said they support an efficient organisational structure which would facilitate technical exchanges and coordination and review regularly the 10YFP implementation, by using existing UN structures, promoting inter-agency collaboration and involving major stakeholders. There was a strong preference for reliance on existing institutions for 10YFP implementation, with greater coherence and coordination among them. For that, several agreed that a lead, coordinating institution could be useful.
63. A number of participants supported the establishment of a dedicated secretariat for the 10YFP. Some participants referred to one or two organizations. Others indicated that accountability would be enhanced if one agency had oversight of the process, and they supported the creation of a single secretariat, within an existing institution based on its proven comparative advantage, to serve a coordinating function. Nevertheless, they stressed the need to coordinate with all relevant UN agencies, any of which could lead programmes in their respective areas of expertise.
64. A few participants made a distinction between a coordination function and a secretariat function, and one observed that in the case of SAICM its governing body sets strategic direction and coordinates among members, while the secretariat works to implement its decisions.

Session 3: Criteria and guidelines for programme selection

65. There was a broad agreement that the criteria in background paper #2 for programme selection form a good basis for discussion at the IPM. It was emphasized that programmes should contribute to progress in integrating the three pillars of sustainable development. They should advance SCP patterns, including by promoting an efficient and sustainable use of resources within the carrying capacity of ecosystems. They should stimulate creativity and innovation. They should be flexible and adaptable to different national and regional needs, priorities and capacities.

Criteria

66. There was a suggestion that programmes could be thematic, covering broad areas. Such “umbrella” programmes could support multiple thematic initiatives at national and regional levels. An example of a flexible and comprehensive approach is the work of the Marrakech Process on sustainable public procurement, with tools developed by the Marrakech Task Force and tested and adapted to both developed and developing countries.
67. Some suggested that programmes should be global in focus, while many emphasized that they should be applicable to developed and developing countries and have the flexibility to be adapted to different needs, priorities and capacities. To that end criteria could exist for global programmes, which would support regional, national and local initiatives.
68. It was suggested that programmes should cover areas not yet addressed by international policies, promote synergies and avoid duplication. There was wide agreement that programmes should address gaps in existing initiatives, the case of agri-food supply chains being given as one example.
69. Multi-stakeholder participation in programmes, from concept development through implementation to monitoring, is important to confer ownership; some felt that it should be a criterion. The importance of engaging business was stressed, including through corporate social responsibility and entrepreneurship promotion.
70. Many agreed that programmes should take a life cycle approach but that not every programme could or should address all stages of the life cycle. At least one participant indicated that programmes should use a “mix of instruments” to effect shifts in SCP patterns.
71. Other criteria suggested include: leverage resources from different sources, ensure transparency, avoid “green protectionism”, provide incentives, be voluntary, have a strong scientific base, have a positive benefit-cost ratio, and concretely result in changed SCP patterns. The last would require indicators to assess consuming differently, less, or better.
72. Several felt that criteria should be based on previous experience of the reviewed models and others that were not reviewed here such as poverty reduction strategies, the Delivering as One pilot initiative, and the African 10YFP on SCP.

Components

73. Some indicated that it is important to distinguish, in the Annex circulated for the meeting, between programmes (global structure) and local and regional initiatives – several of which can be supported by a single programme.
74. There was also some support for the idea that programmes need an indicator and monitoring component, possibly using at least a minimum set of standard indicators. How that might

work in practice would need to be more clearly defined. One participant warned that past efforts to agree on indicators have been progressing very slowly.

Areas

75. Several participants indicated that the Marrakech Process has already identified regional SCP priorities based on processes held in each region and these priorities have guided the submission of several programmes in the Annex. Other initiatives and agencies also have developed capacity and lessons that could be scaled up.
76. One suggestion was to cluster programmes into production-oriented, product-oriented, consumption-oriented and cross-cutting, but preference was expressed that a life cycle perspective be maintained. Another suggestion was to focus on 5-10 broad (cross-cutting) programme areas, for which clear goals and/or targets would be defined.
77. As in the case of SAICM, it was noted that not all programmes need to be agreed at the outset, as long as criteria are agreed upon. Indeed, the 10YFP needs to be flexible enough to accommodate new programmes. However, concrete programmes from the outset would more easily lead to funding. For instance, the EU indicated that it is exploring extending the successful SWITCH Asia programme to Africa and Latin America, but this requires concrete programmes where value for money is clear.
78. E-waste and integrated waste management, sustainable agriculture and food (including fertilizer) were identified as gap areas which could be the focus of programmes. It was emphasized that criteria are important to avoid having a laundry list of programmes. Some participants questioned whether issues discussed in other fora such as carbon and eco-labelling should be included in the 10YFP.
79. In identifying programmes, we should build on the successes of the Marrakech Process as well as other international, regional and national initiatives. A few participants suggested that without a national framework on SCP not much progress is possible. It was suggested that Table 3 could serve as a guiding map for countries to guide their thinking on a SCP framework at the national level and to select voluntary programmes. Good programmes would most likely be selected and adapted from previous experience.

Session 4: International support and means of implementation for national and regional delivery

80. Comprehensive, integrated, resourced: these were mentioned as important requirements for a successful 10YFP.
81. Developing countries place great importance on ensuring that resources are adequate for effective implementation of the 10YFP, including to build effective national SCP

programmes. Several stressed that new resource mobilization needs to be given proper attention.

82. Most developed countries emphasized more efficient use, leveraging and realignment of existing resources to address new priorities such as SCP. It was mentioned that some donors were realigning priorities to provide greater support to SCP but that this must respond to national priorities, and national governments must first “own” the SCP agenda.
83. The contribution of the international financial institutions and regional development banks should be further considered.
84. Private sector resources – not just finance but technology and expertise – also need to be tapped, and it is critical to provide incentives for active private sector engagement in implementation.
85. It was noted that, in designing programmes to support SCP, we should challenge the assumption that developed countries are “clean” and developing countries “dirty” and thus the South will be handed over capabilities to be cleaner. Developed countries need to take the lead in changing consumption and production patterns, but learning can go both ways. There is also considerable scope for South-South co-operation.
86. The SCP work of the UN regional commissions and a number of UN agencies was presented.
87. At the regional level, regional commissions implement sustainable development programmes of priority to their regions, enabling sharing of experiences. In Latin American region, for example, these include programmes on low carbon transport, urban development, sustainable cities, small and medium enterprise development, scientific and technological development policy, and fiscal policy, that can support implementation of the 10YFP. Regional commissions are multidisciplinary in their staff and in the institutions they support, extending beyond the environmental realm. For instance, a policy observatory is currently being developed that could support exchanges of information and experiences on SCP initiatives.
88. Working closely with national governments, especially on capacity building, UNDP is the lead UN agency in each country and is also relevant to the SCP process. UNDP has a large natural resource management portfolio focused on primary production, across landscapes covering agriculture, fisheries, forestry, tourism, protected areas, water, energy and adaptation to climate change. Increasingly it is also working with the private sector and market development. Key approaches of relevance to SCP are supply chain management, certification and carbon credits, and economic valuation of ecosystem services. UNDP country offices can support national implementation of SCP, especially programmes to support sustainable consumption.

89. UNEP has been active in the field of sustainable consumption and production since Johannesburg, with its Governing Council endorsing its first decision on SCP in 2003. Since then, UNEP has supported the Secretariat of the Marrakech Process jointly with UN DESA. Since 2006 SCP is one of six core priorities within UNEP's programme of work, which define the focus of UNEP's activities. UNEP works with diverse actors, including public authorities, international agencies, industry associations, civil society to mainstream and support the development and implementation of sustainable consumption and production approaches, practices and policies. In consultation with key partners, UNEP has proposed 11 programmes for possible inclusion in the 10YFP, based on the priorities identified through the Marrakech Process and on existing initiatives and partnerships, including the work of the Marrakech Process Task Forces.
90. The UNIDO-UNEP programme of cleaner production centres launched in 1994 now includes 48 centres around the globe. They have produced technical tools and training materials to train thousands of national CP experts. Regional roundtables and networks of NCPCs are established in Africa, Asia and Latin America. As a result of the programme's evaluation in 2008/09, a refocused programme on Resource Efficient and Cleaner Production (RECP) was launched. Though the RECP concept has identified win-win opportunities, large-scale implementation across industries and countries has not occurred. The new programme seeks to expand and strengthen the network of NCPCs and other RECP service providers, capture those win-win opportunities, and mainstream RECP into government policy and enterprise finance.
91. Participants acknowledged that the work of the United Nations agencies and programmes is encouraging, including those not present at this meeting such as UNITAR, but suggested that more is needed to scale up and mainstream SCP.

Way forward

92. The Chair of CSD-19 stressed the need to work towards achieving a 10YFP which represents a highest common denominator. There is emerging convergence on the functions of a 10YFP, a coordinated institutional structure, and the criteria for developing programmes.
93. In preparing for IPM, the CSD-19 Chair indicated the need for a further background document jointly prepared between UN-DESA and UNEP to elaborate further on those elements where there is a sense of convergence. This document is intended to further facilitate discussions during the IPM.
94. Though the Annex of the Background Paper #2 on programmes and initiatives was considered useful, it was suggested that the Secretariat consult further with member States and other stakeholders on potential programmes for the 10YFP before the IPM and reflect the results as appropriate in a revised Annex to be made available as a background paper for the IPM.

95. Many ministries and officials in member States are still not very familiar with SCP and a few participants indicated that delegates should go home and raise awareness in their own countries about SCP. The Chair's Summary could be used as basis for regional consultations with a view to building a regional consensus on key elements for the 10YFP ahead of the IPM.
96. The Chair of CSD-19 pointed to the need to debrief NY based delegations, 2 to 3 weeks before the IPM, on the outcome of the Intersessional meeting.

Annex 1**Closing remarks by H.E. Ms. Lucía Chandeck
Administrator General of the National Environmental Authority of Panama**

Quisiera compartir con ustedes un resumen de los principales aspectos que fueron discutidos sobre la agenda que estuvo a consideración durante estos dos días.

Nos hemos reunido aquí en la Ciudad de Panamá, para compartir nuestra visión sobre los objetivos, funciones, elementos y programas que pueden ser parte del Programa a Diez Años sobre Consumo y Producción Sostenible.

Sin duda hubo un intercambio muy positivo entre los participantes que vinieron de los Estados Miembro, Agencias del Sistema de las Naciones Unidas y Grupos con interés particular a esta agenda.

Necesitamos identificar una base común para avanzar en este proceso y poder presentar a la Reunión Intergubernamental que se reunirá en Nueva York a fin del mes próximo.

Necesitamos identificar también aquellos puntos sobre los cuales existen diferencias y para ello consultar con nuestras capitales para encontrar cómo avanzar hacia la reunión de la Comisión de Desarrollo Sostenible Número 19, que se llevará a cabo en mayo próximo.

El Ministro Borbely señaló las múltiples crisis que enfrentan al mundo y enfatizó en sus palabras iniciales, el día de ayer, que no podemos perder más tiempo para llegar a concretar el marco a diez años.

Necesitamos ser ambiciosos y acordar una acción que pueda estar a consideración de la CSD19.

Los países desarrollados deben tomar el liderazgo y avanzar en materia de Consumo y Producción Sostenible tomando en consideración las responsabilidades comunes pero diferenciadas y las capacidades respectivas.

Los objetivos y las metas comunes requieren involucrar a otros actores, ser ambiciosos para poder concretar metas y objetivos sobre los cuales todavía requerimos llegar a consensos.

El programa a 10 años debe tener un amplio respaldo político y debe ser asumido por los Estados Miembro al más alto nivel.

Se necesita ser flexibles para poder incorporar las prioridades y necesidades de los estados miembro y de las regiones indistintamente de su nivel de desarrollo. Y a la vez, adaptarse a cualquier reto que surja en el camino.

SOBRE LAS FUNCIONES

En el documento número uno que tuvimos a consideración, se detallaron una serie de funciones para el marco a diez años que serán un buen punto de partida para las discusiones de la Reunión Intergubernamental.

Ellas requerirán todavía de mayor discusión, pero estimamos que los elementos principales han sido incorporados dentro de estas funciones.

Hemos acordado, o al menos ese es el sentir de la mayor parte de las delegaciones, que la agenda sobre consumo y producción sostenible debe insertarse dentro del proceso de decisión a todos los niveles, sea del sector público o del sector privado.

Esta debe facilitar el intercambio de experiencias y conocimientos, establecer puentes entre todas las comunidades usuarias del Consumo y la Producción Sostenible, para establecer sinergias y fortalecer las capacidades a nivel local, nacional y regional; y que permitan la implementación, crear consciencia y movilizar a todos los actores para asegurar el avance sobre la agenda de Consumo y Producción Sostenible.

Entre las consideraciones para el establecimiento de la estructura institucional se vio la necesidad de permear la agenda sobre Consumo y Producción Sostenible en el trabajo de los ministerios, instituciones públicas que permita la participación de actores y grupos; para lo cual requerimos mecanismos que permitan un mejor conocimiento de esta agenda.

El marco programático para los próximos diez años necesita contar con apoyo internacional de parte de iniciativas nacionales y regionales para lo cual se establecerían puntos focales con el apoyo de actores y grupos del sector privado interesados.

La visión general apunta que debemos hacer todo el esfuerzo posible para incorporar instituciones que estén trabajando en temas de interés y con pertinencia al programa marco para los diez años. Entre estos pudieran estar los Centros de Producción Más Limpia, mesas redondas y espacios de intercambio de conocimiento como en el caso de Panamá, la experiencia de la Ciudad del Saber.

Se vio la necesidad de fomentar una mejor coordinación y coherencia entre las distintas organizaciones vinculadas a la producción y consumo sostenible.

Se necesita de un espacio a nivel internacional que aloje el marco operativo y permita la participación de los múltiples actores involucrados en esta agenda. Entre los posibles modelos para la estructuración del marco operativo se sugirió tomar en cuenta las experiencias del Proceso de Marrakech y SAICM.

Muchos Estados participantes en esta Reunión, sugirieron la necesidad de contar con una secretaría eficiente y dedicada que sea lo suficientemente verificable y que incorpore otros actores, como ha sido la experiencia de agencias de Naciones Unidas que puedan liderar programas de Consumo y Producción Sustentable en sus respectivas áreas de especialidad.

CRITERIOS Y PARÁMETROS DEL PROGRAMA

Hubo un amplio consenso con respecto a los criterios en el documento de trabajo número 2, sobre selección de programas, lo que forma una buena base para la discusión en la Reunión Intergubernamental Preparatoria.

Se enfatizó que los programas deben contribuir para progresar en la integración de los tres pilares del Desarrollo Sostenible.

Deben ser flexibles y adaptables a diferentes prioridades, necesidades y capacidades nacionales y regionales.

Deben impulsar el avance del Consumo y Producción Sustentable y el uso sostenible de los recursos.

Deben estar científicamente basados.

Deben estimular la creatividad, innovación y el compromiso de las múltiples partes interesadas.

MEDIOS DE IMPLEMENTACIÓN

Se señaló que los esfuerzos para la implementación del Programa a Diez años debe apuntar a que sean comprensivos, integradores y debidamente financiados.

Los países en desarrollo ponen énfasis en que los mismos sean adecuados para la efectiva implementación del Marco de Programas a 10 años. Se necesitan recursos nuevos e identificables para la construcción de programas nacionales efectivos sobre Consumo y Producción Sustentable.

El trabajo de las Agencias de Naciones Unidas y programas es motivador, pero existe la necesidad de trabajar hacia arriba, integrando experiencias conocidas ya probadas.

Los países en desarrollo enfatizaron que se debe prestar la atención necesaria a la movilización de nuevos recursos.

Los países desarrollados enfatizaron el mejor uso, apalancamiento y realineamiento de los recursos existentes para encargarse de nuevas prioridades, como los son el Consumo y la Producción Sustentables.

Fue mencionado que algunos donantes estaban realineando prioridades para proveer más apoyo al Consumo y Producción Sustentable, pero que esto debe responder a prioridades nacionales; y que los gobiernos nacionales deben primero apropiarse de la agenda sobre Consumo y Producción Sustentable y darle prioridad.

La contribución de instituciones financieras internacionales y regionales y bancos de desarrollo regionales deben ser tomados en cuenta.

Recursos del Sector Privado - no solo financiamiento sino tecnología y “expertise” - también deben ser identificados, y es importante proveer incentivos para el compromiso activo del sector privado en implementación.

CONCLUSIONES

Todavía hay un gran trabajo que hacer de aquí a la Reunión Preparatoria Intergubernamental. Tenemos poco tiempo por lo que hemos de usarlo muy eficientemente.

El Ministro Borbely nos guiará en un momento con respecto al camino por recorrer hacia la Reunión Intergubernamental Preparatoria y las tareas que se deben cumplir.

Quisiera decir a mis colegas de todos los gobiernos, en calidad de Ministra, que hemos de salir de esta reunión con el firme compromiso de consultar a fondo, con nuestras capitales, sobre cómo llegaremos preparados a la CSD19 con una propuesta ambiciosa para el Marco de Programas a 10 años donde; se atiendan nuestras prioridades nacionales para el Desarrollo Sostenible y se contribuya concretamente al progreso global hacia el Consumo y Producción Sostenible, como parte de nuestros esfuerzos cooperativos para resolver los problemas críticos que podrían afectar nuestro futuro y el de las generaciones por venir.

Gracias a todos por asistir a esta importante reunión en nuestra querida República de Panamá.

Juntos compartimos una meta, que es lograr un acuerdo ambicioso para el Programa Marco para 10 años hacia el Consumo y Producción Sostenible, en beneficio de nuestro planeta y desarrollo humano que compartimos.

Annex 2

Way forward by H.E. Mr. László Borbély Minister of Environment and Forestry of Romania and Chair of CSD-19

Madam Minister, colleagues

We have just heard from Madam Minister the most salient points of the Chair's Summary and I would like to say a few words about the way forward as the Chair of the CSD-19 and therefore together with my other colleagues in the Bureau responsible for the process to bring us to the agreed conclusions of the CSD-19.

This meeting, I hope you will agree with me, was necessary, timely and also successful and productive. In my view it was a kind of a clearing house and a catalyst to discuss the most important issues concerning 10YFP.

I believe that all of us are much clearer on where there is a broad agreement.

There is a broad convergence on the need to catalyze political will towards launching an ambitious and yet realistic 10YFP at CSD-19. It would be a very positive step towards strengthening SCP.

I sense broad support for a number of elements of the common **vision** and objectives of the 10YFP. In particular:

- SCP should be treated as a cross-cutting issue based on life-cycle approach;
- The 10YFP has to be based on the sustainable development framework including all its three pillars;
- The 10YFP has to incorporate the principle of common but differentiated responsibilities;
- The involvement of all stakeholders including industry and private sector is essential;
- Means of implementation and technology transfer together with capacity building are necessary for successful implementation of SCP.

I also see an emerging convergence on the **functions** of a 10YFP. The six themes identified in the background paper provide a good basis for further discussion.

We have more work to do on the appropriate **institutional** structure, but we made significant headway in assessing the alternative models reviewed jointly by UN-DESA and UNEP. There is convergence that the 10YFP must be supported by a strong and efficient institutional arrangement, which should be built on existing structures by improving them, enhancing coordination, and adapting them to the functions. Positive lessons from SAICM and Marrakesh Process have been mentioned.

We have also had the opportunity to review some possible options for **programmes**. The concreteness of programmes is essential for mobilizing the required political and financial support for the 10YFP. We agree that programmes need to be based on explicit criteria, including resource and material efficiency, addressing multiple stages of the lifecycle,

advancing all three pillars of sustainable development, incorporating regional and national specificities, and taking into account different levels of development.

Dear Colleagues,

As is to be expected, however, there remain some areas where more discussion is necessary in order to reach consensus on a meaningful agreement. They often include the **how** of achieving something where there is broad agreement on **what** needs to be achieved.

These are just some of the issues that we will be working on with the support of all relevant parties. The IPM will be the next opportunity to bring our thoughts together so that we can prepare a robust and forward looking negotiations text for CSD-19.

The level of ambition depends on all of us and our political will. I would like to appeal to all of you, governments as well as Major Groups, to inform your capitals and decision-makers of what has been discussed here, get clear instructions on the direction to take, and engage with your regional and political groups to develop widening areas of consensus and agreement.

Let me reiterate again the important role of Major Groups, both in articulating their vision, communicating best practices as well as expectations, and ensuring that the issues that they deem important for their countries, regions, and constituencies receive a fair hearing.

We, as the Bureau, will do our utmost to support you in this endeavour. It is very important to brief New York delegations on the outcome of our discussions here.

In this context, I would like to say that the Chair's summary from this Intersessional will be posted on the CSD-19 website shortly. The formal report of the Intersessional will be an official document for CSD-19 and will be an important contribution to our future discussions and negotiations.

Dear Colleagues,

We have a short time ahead of us, so let us work all together towards achieving a 10YFP which represents a highest common denominator. I believe there is an emerging convergence on the functions, a coordinated institutional structure and the need for criteria to help develop effective programmes. Sufficient resources and capacity are also important elements discussed at the meeting.

In preparing for IPM, I believe there is a need for a background document jointly prepared between UN-DESA and UNEP to elaborate further on those elements where there is a sense of convergence. This document is intended to further facilitate our discussions during the IPM.

Thank you.
